INTRODUCTION

This study was undertaken in order to better understand trends and changes which have taken place in Kansas during the fifty years covered by this study. In order to interpret these trends more accurately, a comparison of changes in population and in assessed valuation of rural areas in the selected counties of the state has been traced through six decades. The statistical data found in the Biennial Reports of the State Board of Agriculture constitute the only sources of information for gathering data on changes in assessed valuation and population. Comparisons made throughout this report originated within this study.

METHOD OF PROCEDURE

In order to secure an unbiased sampling of the counties of the state, the alphabetical list of counties was numbered from one to one hundred and five, and the odd numbered counties were chosen for this survey. In ten other counties, existing conditions were such that it was assumed they might affect the findings of the study in a manner different from the findings drawn from the conditions existing in the fifty-three counties selected for study. The ten counties added were: Bourbon, Butler, Cowley, Ellis, Harvey, Labette, Lyon, Leavenworth, Reno, and Sumner. These counties were included

in the study because of historical, industrial, mineral, and agricultural importance.

The rural population and the assessed valuation of the land in each township of the sixty-three counties as shown in the State Board of Agriculture Reports for 1886, 1896, 1906, 1908, 1916, 1926, and 1936 were tabulated. The total population, the rural population, the total assessed and the total land valuations for these counties were ascertained and percentages of the rural population to the total population and of the land valuation to the total valuation were computed.

For the purpose of determining shifts in the population within the state, the state was divided, arbitrarily, into three sections approximately equal in area. The eastern section was made up of those counties lying east of a line drawn along the eastern boundaries of Republic, McPherson, Harvey, and Sumner counties. The central section was composed of those counties lying between this line and a line drawn along the west line of Phillips county directly south and along the west line of Comanche county. The western section was composed of all counties situated west of this latter line. The totals for these three sections, as well as for the ten extra counties chosen were ascertained and

percentages of the rural population to the total population and of the land valuation to the total valuation were computed.

Table 1. Showing number, name and area in square miles of counties selected for this survey, also total area of the state and area not considered.

No.	County	Area	:	No.	County	Area	:	No.	County	Area

Note: This table shows for sixty-three counties, the eastern, central, and western sections and ten counties as groups: total population, lines 1, 9, 15, 21, and 27; rural population, lines 3, 10, 16, 22 and 29; per cent rural, line 4, 11, 17, 23, and 30, total valuation, lines 5, 12, 18, 24, 31; land valuation, lines 7, 13, 19, 25, and 33; and per cent land valuations lines, 8, 14, 20, 26, and 34. For the sixty-three and ten county groups are shown the per cent of the total population of the state represented by the total populations of these groups, lines 2 and 28, and the per cent of the total valuations of the state represented by the total valuations of the groups, lines 6 and 32, 1886 to 1936, inclusive. Also for the same groups, for the period 1886 to 1936, the totals and per cents of increase in population, the totals and per cents of decrease in rural population, and the amounts and per cents of increase in total land valuations are shown, all valuations expressed in thousands of dollars. The valuations for 1886 were adjusted to the basis of those for 1908 and subsequent years by using as a factor the ratio which the valuations for 1908 bore to those for 1906.

FINDINGS

The sixty-three counties of the state included in this study have a total area of 49,332 square miles or 60 per cent of the area of the state and contain approximately three-fourths of the population of the state, line 2, table 5.

A review of the dates of organization of all of the counties of the state indicates that the arbitrary division of the state into three sections for the purpose of comparison was quite logical from the point of view of dates of settlement and organization. The eastern section was settled and organized during the earlier period of settlement in Kansas prior to 1870. The greater portion of the central section was settled and organized between this date and 1880. The majority of the counties in the western section were settled and organized subsequent to 1880.

An inspection of the percentages of the three sections reveals that the population in the eastern section is more urban than rural, in the central section it is about evenly divided, and in the western section it is decidedly more rural than urban, lines 11, 17, and 23, table 5.

The existing conditions in the ten added counties seemed to have had the effect of narrowing the range of fluctuation of the aforesaid percentages of the group to a greater degree

than in the other groups or in the whole group of sixty-three counties, lines 28, 30, 32, and 34, table 5, as compared with lines 2, 4, 6, 8, 11, 14, 17, 20, 23 and 26 of the same table.

The eastern section was composed of forty-three counties having an area of 28,075 square miles. This was 35 per cent of the total area of the state. Of the forty-three counties in this section, twenty-nine were found to be included in this study. These counties had an area of 19,986 square miles, which was 24.3 per cent of the state area. All but three of the counties in the eastern section were organized prior to 1870.

The central section was composed of thirty-one counties, having an area of 25,779 square miles. This was 31.4 per cent of the area of the state. Twenty of the thirty-one counties in the central section were found to be included in this study. These counties had an area of 16,689 square miles which was 20.3 per cent of the area of the state. Six of the counties in this section were organized before 1870 and only two were organized after 1880.

Thirty-one counties made up the western section. Their area, 27,660 square miles was 33.6 per cent of the total area of the state. Of this number fourteen counties, having

an area of 12,657 square miles were found to be included in this study. This was 15.4 per cent of the area of the state. In this section only six of the counties were organized before 1880.

The total population of the state declined from 1888 to the low point of 1,334,734 in 1895. This was caused by the breaking of the land boom of 1884 to 1887, the drouths of 1887 and 1890, and the resultant hard times of 1891 to 1896.

The population began increasing again in 1896 and has steadily continued to do so since that time. In 1936 there was a net increase of 434,011 or a 31 per cent increase over 1886.

In the 63 counties included in this survey, over the same period, there was an increase of 396,489 or 39 per cent in population; but there was a decrease of 119,905 or 18 per cent in rural population, lines 1 and 3, table 5.

In the ten counties included, there was an increase of 47,000 or 17.6 per cent in total population and a decrease of 34,288 or 22 per cent in rural population, lines 15 and 16, table 5.

In the counties of this survey included in the eastern section of the state, there was an increase in total population of 277,756 or 35.3 per cent, line 9, table 5. In the

central portion there was an increase of 138,563 or 43.9 per cent, line 15, table 5; in the western area there was an increase of 30,170 or 52.3 per cent, line 21, table 5. In the same divisions there was a decrease in rural population of 75,228 or 19.2 per cent for the eastern; 41,937 or 19 per cent for the central; and 2,730 or 5.3 per cent for the western sections, lines 10, 16, and 22, table 5.

A preliminary study of the figures on assessed valuations revealed a remarkable increase in the total and land valuations in the state for 1916 over 1906. Further searching revealed the fact that this increase, ranging from 300 to 1300 per cent in the case of individual townships and from 400 to 600 per cent for county totals, occurred in 1908. Accordingly the 1908 figures were included in the survey.

The reports of the Kansas State Board of Agriculture did not reveal the reason for this increase, but a personal visit to the office of the Board elicited the information, that on July 1, 1907, the law creating the State Tax Commission and requiring that all property within the state be assessed at actual value, became effective, and this accounted for the large increase in the 1908 reports.

A visit to the office of the State Tax Commission verified this information and disclosed the fact that in 1932

the Commission ordered a 14 per cent reduction in valuations on land and an 8 per cent reduction on city improvements. In 1934 a further reduction of 16.66 per cent was made in the valuation on both rural land and improvements and city lots and improvements. This accounted for the rather marked reduction of assessed valuation for 1936 from those of 1926.

For the purpose of comparison the percentage of increase of the 1908 valuations over those for 1906 was computed and used as a factor to convert the valuation for 1886 to the same basis as that for 1908 and succeeding years. On this basis a total increase of \$1,026,126,000 or 60.9 per cent, for total valuations and \$286,871,000 or 31.6 per cent, for land valuations was indicated for the entire state for 1936 over 1886.

Similar computations for the ten counties revealed increases of \$141,088,000 or 46.2 per cent for total valuations and \$21,692,000 or 15.1 per cent, for land valuations for the same period, lines 31 and 33, table 5.

For the same period by the same method, increases of \$752,702,000 or 60.2 per cent, for total valuations and \$124,114,000 or 14.7 per cent, for land valuations were shown for the sixty-three counties of this study, lines 5 and 6, table 5.

In like manner were figured increases of: \$351,908,000 or 47.6 per cent for total valuations and \$17,288,000 or 4.6 per cent for land valuations for the eastern section; \$340,940,000 or 79.6 per cent for total valuations for the eastern section; \$340,940,000 or 79.6 per cent for total valuations and \$71,325,000 or 29.7 per cent for land valuations for the central section; and \$594,404,000 or 72.6 per cent for total valuations, and \$35,529,000 or 77.3 per cent, for land valuations for the western section, lines 12 and 13, 18 and 19, and 24 and 25, table 5.

The percentage of the total assessed valuations of the state which was represented by land valuations was computed and was found to be 51.4 for 1886, 51.9 for 1896, 46.8 for 1906, 49.1 for 1908, 48.6 for 1916, 47.5 for 1926, and 44.1 for 1936.

SUMMARY

In the sixty-three counties included in this survey, considered as a group, as well as the four smaller groups into which they were arranged for purposes of comparison, there is a decided trend in population from the rural to the urban communities. This movement is likewise reflected in the figures for each of the counties considered separately.

In these figures, with the exception of some three or four counties, there is shown an actual decrease in the number of rural residents as well as a decrease in the percentage of rural residents. In these few counties with one exception, that of Leavenworth county, while there was an increase in actual numbers of rural residents the urban communities were developed to such a greater extent that there was a decrease in the percentage of rural population to the total population in those counties.

This shift from the rural to the urban communities may be accounted for in part by the fact that through the adoption of power machines such as headers, combines, tractors, and trucks on the farm, there is a decreased demand for labor. It may also be accounted for in part by the greater conveniences, more attractive social life and the so-called "white collar jobs" of the urban communities.

The automobile also enables many farmers to be urban dwellers, while at the same time engaging in agriculture.

In the ten counties and in the eastern section of the state the population is slightly more urban than rural. In the central section it is slightly more rural than urban; in the western section it is more rural than urban in the ratio of almost three to one.

There is no marked evidence of a shift in population from the eastern to the central or western areas. The fact that the percentage of increase in population for the eastern section is less than that for the whole group or for either of the other two sections is an indication of a greater development in those two areas than in the eastern portion.

The percentages of increase in total valuations and in land valuations in the central and western sections indicate a much greater growth in those two sections than in the eastern section.

In the state as a whole the land valuations amount to approximately one-half of the total valuations. In the eastern section the land valuation is about 40 per cent of the total valuation. In the central section the land valuation is a little more than half of the total valuation, while in the western area the valuation of the land accounts for nearly 60 per cent of the total valuation.

ACKNOWLEDGMENT

The writer wishes to express his appreciation to Dr. C. V. Williams for his interest and guidance during the preparation of this thesis.
